PREFACE

The Annual Price Bulletin for the year 2023 is the 6th Edition of the New Consumer Price Index (CPI) for Rural, Urban and Combined using the base year 2010=100 published by the Directorate of Economics & Statistics, Nagaland. The Department has done away with the old CPI of Urban Non-Manual Employee (UNME) using the base year 1981-82=100.

The new CPI was developed basing on the National Sample Survey (NSS) 66th Round State Report for the Consumer Households Expenditure survey. Altogether, 105 items in rural sector, 130 items in urban sector and 131 items in combined sector are included in the weighting diagram. Under the New series, the prices of 238 items (both weighted and unweighted) are collected from all the 11 districts covering 13 urban price centres and 22 rural price centres on weekly basis. The wholesale prices are collected from the Dimapur Urban centre. This publication includes price data of wholesale prices of consumer goods, relative movement of retail prices of consumer goods, non-consumer goods, building materials and Consumer Price Index

I acknowledge all the District Economics and Statistics Officers and Staff for collecting the required price data in the district price centres. I place on record the contribution rendered by the price section in bringing out the publication.

I hope that the data contained in this report will be useful for policy planners, administrators, research scholars and general public. Comments and Suggestions for improvement of the bulletin are welcome.

CONCEPTS AND DEFINITIONS

INTRODUCTION:

In the economic development of a Country or State, Price plays a very significant role. Analysis of data on prices is an important component in the monitoring of progress and health of an economy. Price is the prime mover of the wheels of the economy namely production, consumption, distribution and exchange. Price affects the living standards of the society, regulates business profits and allocates the resources for the optimum output and distribution. Thus, it acts as a powerful agent of sustained economic development. Price Statistics is one most important economic data which influence and reflect the changes in economic activities. The changes in prices over a period of time can be estimated by the statistical device of Index Numbers of prices. Any abnormality changes in the prices can be checked by taking appropriate corrective steps by the Government.

PRICE: Price is the quantity of payment or compensation given by one party to another in return for goods and services. In simple terms, price is nothing but the cost or value of the product.

PRICE INDEX: An indicator of the average price movement over time of a fixed basket of goods and services. The item basket of goods and services is determined in view of whether the changes are to be measured in retail, wholesale or producer prices. Price index reflects the overall change in a set of prices paid by a consumer or a producer. It provides one of the basic parameters needed for economic planning and policy formulation by Government as well as private organizations.

RETAIL PRICE: Retail price is defined as the price paid by the ultimate consumer which includes all taxes and excludes discount etc. Retail prices are currently in use for the construction of Consumer Price Index (CPI).

CONSUMER'S PRICE: Consumer's price is the amount paid by the consumer in the exchange of goods and services. The rate at which the consumer purchases goods and services is called consumer's price.

WHOLESALE PRICE: Wholesale price is the rate at which a commodity is sold to the sellers or distributors in large transaction. The price includes all the incidentals borne by the purchaser such as price of a container, charges for weighment, wholesaler's commission, market fees, taxes etc.

SUBSIDIZED PRICE: A price for a product that is reduced because the government has paid part of the cost of producing it.

CONSUMER: A consumer is a person or organization that uses economic services or commodities. The consumer is the one who pays something to consume goods and services produced.

GOODS: Goods are materials that satisfy human wants and provide utility.

SERVICE: A service is a transaction in which no physical goods are transferred from the seller to the buyer. Services are by definition intangible.

INDEX NUMBER: Index number is a statistical device designed to measure the relative change in the level of a phenomenon with respect to time, place etc. An index number is an economic data figure reflecting price or quantity compared with a standard or base value. The base usually equals 100 and the index number is usually expressed as 100 times the ratio to the base value.

CONSUMER PRICE INDEX: Consumer price index (CPI) measures changes over time in the price level of consumer goods and services purchased by households. CPI numbers are widely used as a macroeconomic indicator of inflation, fixing salary and dearness allowance of the employees, used for monitoring price stability and also inflators/deflators in the national accounts estimates. The CPI is compiled by using Laspeyres base weighted formula which is given below:

$$I_n = \frac{\sum P_n Q_o}{\sum P_o Q_o} \times 100$$

Where,

I_n = Index Number

Q_o = Base year quantity

P_n = Current year price

P_o = Base year price

WEIGHT: Weight represents expenditure on specific good (s) or service (s) as percentage/proportion of the total consumption expenditure of all goods and services included in the consumption basket for the target group during the reference period/ base period. In other words weight is nothing but the relative importance of goods and services consumed by a target group during the

reference period. Weight of a particular item is different for Rural, Urban and Combined. For example weight of rice for Rural is 98.71, for Urban is 95.07 and for Combined is 98.66.

WEIGHTING DIAGRAM: The whole structure of weight is known as the 'Weighting Diagram'. Weight distribution is prepared by building it up "from below" methods, i.e., add up the shares of each item within a sub group, then subgroup shares into major shares and then add up to arrive at "all commodities" normalized to 100. In other sense, all items in the index basket at individual level, sub level, group level and general level were given weight and normalized to 100 at each level. It is not feasible to monitor the price behavior of all the items on which population reported, consumption expenditure on representative items are retained in the index basket which are manageable over time. For this purpose, groups of items which meet similar or related demands of the consumers are formed. There are 6 recognized groups as detailed below:

1. Food Group
2. Pan, Supari, Tobacco & Intoxicants
3. Fuel & Light
4. Housing
5. Clothing & Bedding
6. Miscellaneous

Those items which are not popular among the targeted population and having expenditure of less than 1% at sub-group level are not included in the index.

IMPUTATION : Item with lesser value in the expenditure distribution is imputed at item level having homogeneity and complementary effects, then impute in sub group and then at group level respectively. In other words, those items which are not included in the index are either added to a particular allied item or distributed over several items included in the index, so that the total expenditure in the average budget is fully taken into account in the weights used in computation of the index.

BASE YEAR: Base year is the beginning or the reference year for constructing an index. A base year is normally set to an arbitrary level of 100.

CURRENT YEAR: The year in which the latest/current estimation is prepared.

PRICE COLLECTION SYSTEM IN NAGALAND:

The Department of Economics and Statistics (DES) collects price data from all the 11 districts in the State. At the Directorate level, the price data are analyzed, verified, estimated and published. In the District, the District Economics & Statistics Officer and its staff collect retail price data of 238 items on weekly basis covering 13 urban price centres and 22 rural price centres. Wholesale prices are collected from the Dimapur urban centre. In the field, the price collectors collect the price data on weekly basis and verify the prices so as to ensure the accuracy of prices obtained. The price data recorded by the price collectors are scrutinized by the price supervisors at the HQ before sending for data processing. In the data processing unit, the price data are further scrutinized and doubtful cases such as abnormal price variation between markets, over time etc. are referred back to the price collectors for rectification and clarification.
